

## Frequently Asked Questions

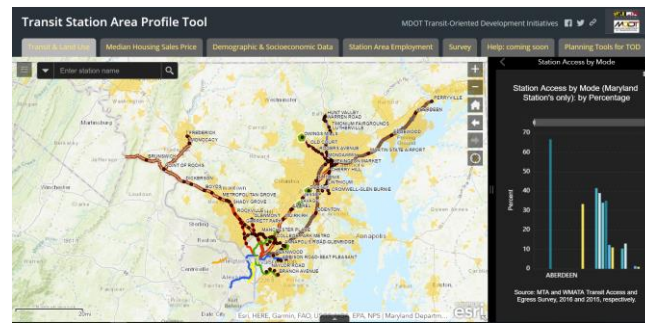

**Question:** Why does the Transit Station Area Profile Tool look different on a large screen (desktop) versus a small screen (smartphone or tablet)?

**Answer:** The web mapping application incorporates [responsive web design](#), which automatically adjusts the layout of the map, charts and tables based on screen size and resolution of the device being used. This behavior is normal and provides users with complete desktop functionality. Users should expect a variation in the applications layout when viewing on a desktop versus a smartphone or tablet. Please see the images below for an example of what you should expect when viewing on desktop, tablet or smartphone.

Desktop viewed at 100% browser zoom

Desktop viewed at 130% or greater browser zoom (see instructions below)

Tablet (portrait)

Tablet (landscape)

Smartphone (portrait)

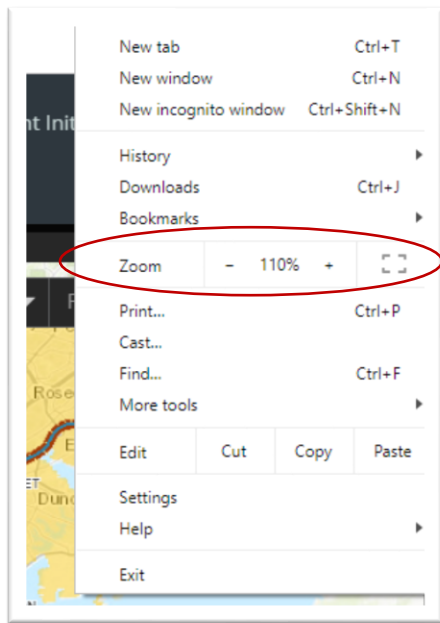

Smartphone (landscape)

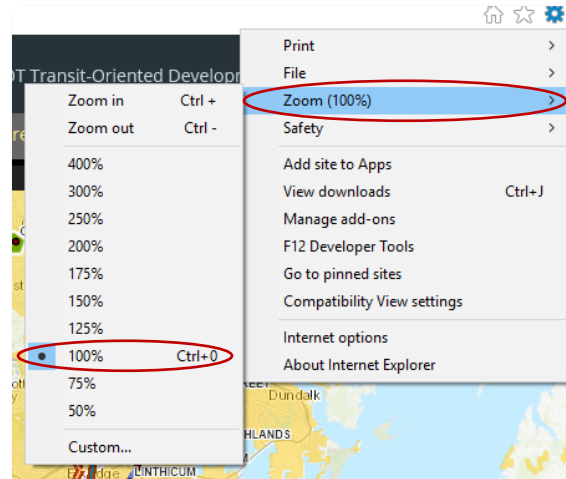

**Question:** I would like to adjust my desktop web browser's zoom-level for easier reading. Can this be done on any web browser?

**Answer:** Yes, all web browsers provide the ability to adjust the zoom-level. Please see the screen captures below for more information on how to adjust several popular web browsers zoom-level.

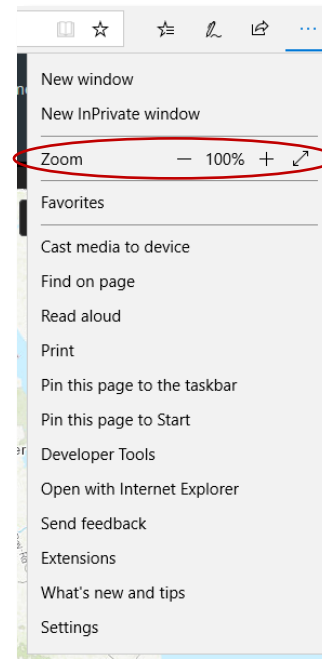

Google Chrome:

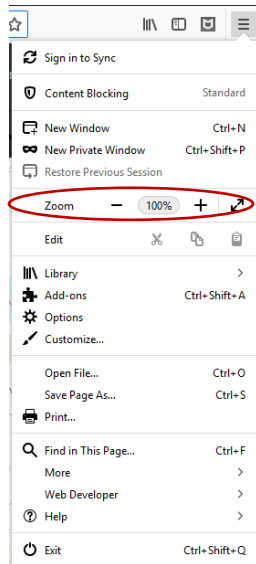

Microsoft Internet Explorer:

Microsoft Edge:

### Mozilla Firefox:

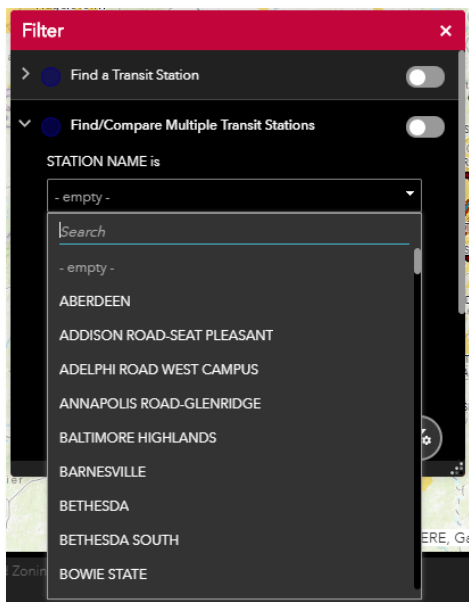

### Apple Safari: Coming soon

**Question:** I would like to learn more about one or more transit stations. How can I find a station on the map?

**Answer:** You can use the map zoom in and out buttons while clicking and dragging the mouse pointer to pan/move the map to a desired location. You can also use the search function located on the map to find a station or an address. If you want to search for multiple stations, use the Filter Tool. Click on the pre-configured filter, click on the ">" and type a station name and/or select a name from the drop-down list. Make sure to activate the filter by toggling the slider to the "on" position.

**Question:** I used the filter to find a transit station but now I would like to look at other stations. The charts illustrate information for one station. How do I change the map and charts back to the way they looked previously?

**Answer:** Please deactivate the filter by toggling the slider to the off position. Please see the images below.

Filter off/deactivated

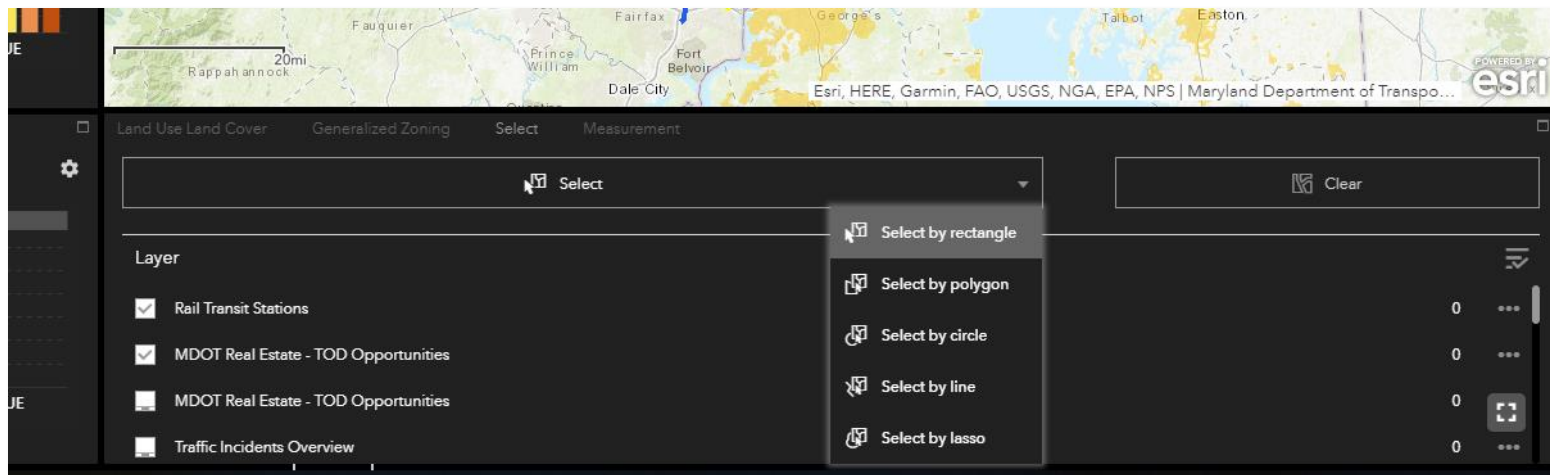

Filter on/activated

**Question:** What is the purpose of the select tool?

**Answer:** The select tool allows a user to choose a feature(s) on the map. This is helpful for users interested in examining a corridor, for example. Select the feature from the list below by toggling a checkbox “on” or “off.” You can select a feature by drawing a rectangle, polygon, circle, line or lasso.

**Question:** The charts are difficult to read and the legend obscures much of the data when hovering over the columns. How do I resize the charts for easier viewing?

**Answer:** Click on the  icon and the chart will expand for full-screen viewing. Click on the  minimize button to revert to the smaller size chart. Please see the image below.

**Question:** Where can I find the attribute table?

**Answer:** The attribute table can be accessed by clicking the  tab located in the bottom center of the dashboard, highlighted in red in the image below. Once open, you can resize the table by clicking the  tab and moving your mouse up or down. To close the attribute table, click on the  tab.

**Question:** Where do I find a list of map layers?

**Answer:** Click the layer list button and then search or turn a layer “on” or “off” by toggling the checkbox. Layers can be moved up or down and transparency and visibility can be adjusted. Please see the image below for more options.

**Question:** Ridership information appears to be missing on the charts. Why is this happening?

**Answer:** Each chart displays ridership information for a single mode of transit. Therefore, not all modes serve each station on the rail network. If you hover over a station that has no information, the legend will illustrate a data point of “0” or “null.” If this happens, the station is served by another mode of transit, which can be viewed by clicking on additional ridership charts highlighted in red in the images below.
